100 bags / carton  
20 bags / sleeve

This product is made possible by EPI's OXO-Biodegradable additive technology. Exposure to sunlight or heat triggers a two-step degradation process, in which the plastic breaks down through oxidation into small fragments, which then biodegrades into the natural elements of carbon dioxide, water, biomass and minerals.

Today's consumers want a responsible and sustainable approach to protecting our environment while using low-cost, convenient, and disposable products. These bags are just as strong as ever, they are not affected by moisture and can be used again until the breakdown process begins.

- No adverse toxicological effects or by-products
- Recyclable (pre and post consumer prior to degradation)
- Proven to degrade in landfill environment, ultimately taking up less landfill space
- Degradation is triggered by heat, UV light/sunlight (enhanced by mechanical stress)
- Food compliant with FDA and EFSA
- Cost effective and competitively priced
- Preserves the environment for future generations

Let your customer know how much you care about the environment.
